Meeting Feb 27, 2026 at 15:07 GMT

Meeting records Transcript

Summary

Edward Kercher and Akash Kanodia, along with the AI assistant, discussed applying design feedback to the website, clarifying the feasibility package, and simplifying the structure to focus on this core offering, which aims to provide early "complete clarity" to clients before significant investment. They agreed to implement interactive deliverables, remove specific day numbers from the package timeline, replace the current "car salesman" tagline with a more "luxury" tone, and offer a free 15-minute expert session as a low-hanging fruit to attract sign-ups. Edward Kercher also requested a lighter color palette using dark and light gray to align with the HMO Designers branding, while Akash Kanodia confirmed that the transcript would be used to generate AI-assisted to-dos for development.

Details

- **Design Feedback and Offer Clarity**: The discussion focused on applying feedback to the website design, specifically by integrating architectural and product elements, although Akash Kanodia and the AI assistant remain unclear about the specific offer and services to highlight (00:00:00). Edward Kercher suggested that the individual pages, such as the one for the "visibility package," look good, but the deliverables should be interactive, for instance, by allowing users to hover, click, or download examples of deliverables such as the feasibility report or sketch schemes (00:03:04). Edward Kercher also offered to share examples of sketch schemes and a recording of an architect meeting to aid in the visual design (00:04:24).
- **Deliverables and Clarity for Clients**: The goal of the feasibility package is to provide "complete clarity" at an early, speculative stage before clients invest significant money (00:05:13). Edward Kercher noted that this process saves

clients a substantial amount of money compared to going directly to a traditional architectural firm, which might charge four or five thousand upfront for a survey, and it helps prevent much larger financial losses due to a lack of initial understanding (00:06:14).

- **Revising the Feasibility Package Timeline**: The team discussed the proposed timeline for the feasibility package, which was initially structured around five days (00:03:04) (00:06:14). Edward Kercher suggested that it might be better to remove the specific day numbers from the deliverables listed on the home screen because much of the information, including the one-hour meeting, sketch scheme, and feasibility report, would be delivered around day five (00:07:15).
- **Rethinking Website Tagline and Tone**: Edward Kercher expressed dissatisfaction with the current home screen wording, specifically "Know if a building works before you buy it," finding it too much like a "car salesman" tagline (00:08:18). The suggested goal is to establish a more "luxury" tone focused on helping users "gain clarity in the shortest amount of time possible and and reducing cost" (00:09:05).
- **Website Design and AI Integration**: Akash Kanodia confirmed that the notes would be based solely on the transcript and that the website development, while hardcoded, was accomplished with the help of AI, using tools like Claude, Gemini, Google AI Studio, and a bit of Chat. Akash Kanodia explained that the transcript of this meeting will be fed to the AI to generate a list of to-dos, which will then be executed, thus greatly speeding up the process (00:11:16).
- **Conversion Funnel Strategy and Pricing**: Edward Kercher stated that the goal with this service, like HMO Checker, is to create a "low-hanging fruit" service to overcome the difficulty of getting clients to purchase online for a massive financial investment (00:13:19). The agreed-upon strategy is to offer the first 15-minute expert session for free to attract sign-ups and get clients into the lead funnel, with payment (e.g., $199) being requested later for the full report and analysis (00:18:04).
- **Content Review and Testimonials**: Akash Kanodia outlined the process page, including submitting property details, an automated desk study, and an architect review, and asked Edward Kercher to verify the list of 15-plus data sources on Figma (00:20:01). The partners also agreed to replace the current fake testimonials with real ones, preferably fetched from TrustPilot or Google reviews, and acknowledged that video testimonials would significantly boost conversion (00:21:16).

- **Simplifying the Website Structure**: The existing four service pages (Commercial Conversion, HMOs, etc.) were deemed to overcomplicate the website, as the core service is the feasibility package (00:24:49). The new plan is to simplify the website to focus almost entirely on the feasibility package page, incorporating the different commercial conversion types (HMO, residential) as singular sections or anchor points within that main page rather than separate pages (00:26:06).
- **Branding and Color Palette**: Edward Kercher found the current dark black and white design "heavy" and not reflective of the brand (00:29:09) (00:31:24). They indicated that the intended brand colors are a dark gray and a lighter gray, which align better with the HMO Designers branding, and requested that Akash Kanodia use those colors moving forward to ensure alignment between the two brands (00:33:07). The desired brand image is "new and fresh," "data-driven and young," moving away from the "stagnant" image of old architecture firms, which favors a lighter color scheme (00:34:07).
- **HMO Checker Performance and Marketing Strategy**: Edward Kercher reported that HMO Checker is seeing "one or two" paid sign-ups per day organically, which is considered a big win, although retention needs focus (00:35:21). The plan is to launch the marketing campaign for HMO Checker the week commencing March 9th. Anshiman will assist in managing the marketing and customer management side, while Edward Kercher focuses on public-facing personal branding and customer liaison (00:38:37).

Suggested next steps

- [ ] Edward Kercher will review the deliverables for the 'visibility package', specifically the 15 checks, and provide comments on whether they are correct, need editing or removal, and if the content makes sense in Figma over the weekend.
- [ ] Edward Kercher will share other sketch schemes examples and a recording of a meeting with Akash Kanodia to use as examples for the 'one hour architect meeting' deliverable.
- [ ] Edward Kercher will come up with a better tagline for the home screen and provide the comment on Figma.
- [ ] Edward Kercher will contact some clients to leave reviews for Fis Architecture, possibly opening a Trust Pilot account for this purpose.
- [ ] Edward Kercher will share the branding document with Akash Kanodia so the correct colors can be extracted and applied to the website design.

You should review Gemini's notes to make sure they're accurate. [Get tips and learn how Gemini takes notes]

Please provide feedback about using Gemini to take notes in a [short survey.]

Meeting Feb 27, 2026 at 15:07 GMT - Transcript

00:00:00

Akash Kanodia: head.
Edward Kercher: Hello.
Akash Kanodia: Can you hear me?
Edward Kercher: Yeah, I can hear you.
Akash Kanodia: Okay. Okay.
Edward Kercher: You good?
Akash Kanodia: Yeah. Yeah. It's Friday.
Edward Kercher: Nice. It's Friday.
Akash Kanodia: Almost Friday.
Edward Kercher: That's right.
Akash Kanodia: Yeah. Huh. So actually I I wanted to do the call mostly for the reason I'm sure like you like the design uh like the approach. I've also applied your feedback which was more on the lines of that it needs to be like architecture related but also like a product part. So I have made all of those changes but I feel and me and the AI we both are still confused a little bit of like what's the offer and what all services can we highlight further. So let me first take you through the uh feedback application that I did and then we can go through the pages and then you can possibly give me comments about it or if you can give me like a direction of if I have missed out on something.

00:03:04

Akash Kanodia: So the first and foremost thing is that I have added all of these individual pages now. So these were not present. So we've got visibility package. So everything you need to decide in 5 days. A structured feasibility study combining automated data analysis with architect design review delivered with a clear go no-go recommendation. Uh what are the deliverables inside it? uh one fixed fee, 15minute expert session, full physibility report, architectural sketched schemes, 1 hour architect meeting, financial analysis and free proposal and project road map. Uh what I need you to do once I share the screenshots with you is first of all am I correct

with these deliverables? Do I need to edit or remove? And uh is this content making
Edward Kercher: Yeah. Yeah. No, that looks all really good. Um I each one of these stages
Akash Kanodia: sense?
Edward Kercher: what would be good is if it either interacted when you hovered over it to show you what you got or you could click on it. So say 15 minute expert session you'd get you know it would show

00:04:24

Akash Kanodia: Okay.
Edward Kercher: Jodie basically and like her credentials and like what basically what you're going to get out of that session right then for the full feasibility report we could you could literally download an example feasibility report or something you know so you could have a look at what you're going to get in that feasibility report because you've got so many examples of this now the sketch schemes you click on that you could go through you know 10
Akash Kanodia: I think I can take these from checker the sketch schemes I guess from the visibility sorry
Edward Kercher: different Well, yeah, I've got other ones I can share with you to be fair.
Akash Kanodia: from the physibility. Yeah.
Edward Kercher: So, it's just showing examples of the sketch schemes.
Akash Kanodia: Yeah.
Edward Kercher: The one hour architect meeting, I can send you a recording of a meeting.
Akash Kanodia: Or like a screenshot is also fine like with you talking
Edward Kercher: Yeah. Yeah.
Akash Kanodia: with Yeah.
Edward Kercher: Like you could maybe even make it with AI like showing an architect client over a video call and sketching things out

00:05:13

Akash Kanodia: Yeah.
Edward Kercher: and talking through it. Do you know what I mean?
Akash Kanodia: Yeah.
Edward Kercher: financial analysis we we show a example of a financial breakdown

of a commercial
Akash Kanodia: Yeah.
Edward Kercher: unit broken up into yeah like example
Akash Kanodia: We can have like a screenshot of like an Excel sheet that you might be sharing with them.
Edward Kercher: of commercial to resi example of um HMO example of high-end residential right fee proposal again you you just show the fee proposal document project road map we show the stages all laid out time scales costs all third party consultants all of that stuff. So like you know once you've had a look at all of that you've got complete basically what we're providing is as much clarity like complete clarity at the beginning in this speculative um early stage.
Akash Kanodia: before they dive in and allocate a lot of money like they have much more clarity of how things
Edward Kercher: So yeah, like
Akash Kanodia: can go and sort of like a road map that they can follow along and maybe take your services and

00:06:14

Edward Kercher: Yeah.
Akash Kanodia: execute the same
Edward Kercher: Yeah. I mean what might be interesting is we don't have to do this now but at some point to talk about how much money this saves people because if you go to a normal architectural firm I want you to jump into getting the survey carried out and spending like say I don't know four or five grand up front. Um so obviously it's a massive saving compared to that to give you clarity. Um, and also, you know, if you carry those things out or say you don't carry that this initial check out and you go straight into it, you know, you could lose hundreds of thousands because you don't understand what you're getting sort of
Akash Kanodia: Yeah, it's a Yeah,
Edward Kercher: thing.
Akash Kanodia: it's a bit like you don't know how much money you might put in, you might not be prepared and so on.
Edward Kercher: Yeah, it's
Akash Kanodia: Are the days making sense?
Edward Kercher: about
Akash Kanodia: So day one is the session. Day five is the report. Day three and four which should have been first is the sketch.

00:07:15

Akash Kanodia: Day five is again the one hour meet and analysis and proposal are
Edward Kercher: Yeah, I would say uh yeah,
Akash Kanodia: included.
Edward Kercher: day one 15 minute meet 100% full feasibility report that should be in with the architectural sketch scheme because you're going to get that as part of the um meeting with the architect. Um so you one of those days uh and then day five sorry needs to be the Yeah, sorry. So it' be 15 minute expert session then you jump straight to day five. Five work. No sorry it is five working days that we've said isn't it for the first meeting. Yeah.
Akash Kanodia: Yeah,
Edward Kercher: Yeah. So day five you'd get the one hour meeting the sketch scheme and the feasibility report. Then day six day seven I'm trying to think about this. We don't want to say it's like day six or seven.
Akash Kanodia: it's all right. You can like let me know on the Figma comments like when you want
Edward Kercher: To be honest,
Akash Kanodia: to

00:08:18

Edward Kercher: the days don't really make sense because you're going to get the first 15-minute expert session and then you're going to get all of the information on day five.
Akash Kanodia: Yeah, they might not be available at day five. So it could go to day seven.
Edward Kercher: Yeah, it's throwing me off because you're basically going to get everything on day
Akash Kanodia: Yeah.
Edward Kercher: five.
Akash Kanodia: H. So do you want me to change this like sort of language where we pitch like you can everything you need to decide in five days
Edward Kercher: I don't mind that that language. If you go back to the home Yeah.
Akash Kanodia: just I'll remove the I'll remove the today's number of and one
Edward Kercher: Yeah. Yeah. Remove that. Yeah. I don't I'm not sure about the wording on the home screen to be
Akash Kanodia: point to be noted.
Edward Kercher: honest. Know if a building works before you buy it.
Akash Kanodia: Yeah.

Edward Kercher: Like I don't know. It just sounds a bit like car salesman.

00:09:05

Edward Kercher: You know what I mean? I don't know.
Akash Kanodia: Uh, give it a spin before you buy it.
Edward Kercher: we can make like more um sort of
Akash Kanodia: So,
Edward Kercher: luxury. I don't want it to be like you know t like a sort of sales tagline. um gain gain
Akash Kanodia: M.
Edward Kercher: clarity in it's yeah it's just about like gaining clarity in the shortest amount of time possible and and reducing cost um I don't know I can probably come up with a better tagline I can't think of one right now it's something I want
Akash Kanodia: Sure. Sure. Yeah, you can just put down the same one like the comments on Figma menu.
Edward Kercher: to it's something I want to comment on. Yeah. Also, by the way, when I look at it on my screen, this feasibility first datadriven little green thing there that um is over the top of the fistal architecture
Akash Kanodia: Uh yeah. Yeah.
Edward Kercher: logo.
Akash Kanodia: I mean like this is uh this is a staging site so you'll find a lot of like execution mistakes.

00:10:16

Akash Kanodia: What I want to get right right now is the number of pages and content on the same. Fixing these things is usually like the last thing which is when I make the website responsive. So I do like quality check and basically I fix all of these things. So design-wise if you think there is something wrong definitely comment on the same. For example, I what I understand from your explanation of these is instead of having boxes, they should have something to show in front of the boxes. So if it's 15 minutes expert session, there should be a picture or something from the session itself and the report and sketch schemes. So those this is what I'm actually looking forward to in terms of feedback. design is like it's if we have decided to go with this color, it's going to be this color. If we have decided to go with this font, it's going to be this font. And the little like this box is already like ticking me off that it's not the same size.

00:11:16

Akash Kanodia: But these things will be resolved before we ship like this is stage.
Edward Kercher: Yeah, that's fine. So,
Akash Kanodia: Yeah.
Edward Kercher: how are you doing? This is you've got an AI that has listened to what I said in those meetings and the AI has built this website. Is that how you've built how you've done
Akash Kanodia: Uh um yeah I mean you can say like I took AI's help to build this website.
Edward Kercher: this?
Akash Kanodia: So this is not on WordPress. This is hardcoded but the coding part of things was done by AI. uh it's really difficult to get designs well done designs with AI which is what I have sort of mastered like I've done so many projects in in the recent times but getting the these designs is really really difficult it's not like I just put a prompt and it just gives me like a nice website uh but how how this meeting helps is
Edward Kercher: Yeah.
Akash Kanodia: I'll what I'll do is I'll put down this transcript directly and feed it to AI and it'll give me like a list of things to do and all I have to do is just make sure it is executed like the way that we have discussed.

00:12:20

Akash Kanodia: So it makes it very fast. Even if it's like Figma comments, I can connect my Figma to AI and ask it to read your comments and what it'll it'll do is it'll create its own meaning of it and start making changes I would say. So it's more about like efficiency but it's it's like it's it's uh the interfaces cracking interface is actually something difficult which
Edward Kercher: Yeah.
Akash Kanodia: like I have practiced a lot I've done like 30 40 practice websites in like less than a month like one website a day one website a sort of
Edward Kercher: Yeah. Yeah. Yeah.
Akash Kanodia: thing.
Edward Kercher: I mean I I so I Khan and I were doing this together because we you remember we built that build cost estimator and stuff.
Akash Kanodia: Yes.

Edward Kercher: So I guess are you using Claude?
Akash Kanodia: Yeah.
Edward Kercher: Is that what's doing it?
Akash Kanodia: Yeah. I've got clips. So actually I've got Gemini Claude,
Edward Kercher: Yeah.
Akash Kanodia: Google AI Studio and a little bit of uh chat all

00:13:19

Edward Kercher: Yeah.
Akash Kanodia: connected to like a workflow or something.
Edward Kercher: Yeah. It's cool. It is cool what you can do now. For sure. Um, I think what I want to just make clear,
Akash Kanodia: Awesome.
Edward Kercher: I I really liked the um the build of HMO Checker. Like what I said to you, I love that website. I think it looks clean. I think it works really well. I also think the journey of the user and the customer on that website, we've got to a really clean state now. And I think the the conversion's pretty good to getting people to pay that initial 30p
Akash Kanodia: Yeah.
Edward Kercher: payment. um which I want to talk to you about at the end of this session cuz you know we want to start pushing ads again. Um, but I think with this it almost I almost wanted this to be
Akash Kanodia: Yeah.
Edward Kercher: slightly similar because the idea is this this feasibility it's a lowhanging fruit to what what I guess what I found difficult with an architectural company when you're trying to get someone to purchase from you online it's really difficult because it's a massive financial investment for them.

00:14:27

Edward Kercher: they don't want to get it wrong. Most architectural practices come through referrals and so because because of the fact that it's it's so costly when things go wrong and it's like the biggest investment some of these people ever make. Um, so what I'm what what what I'm triing with this is the lowest possible cost that we can essentially just break even on that pays for the time of the architect that gets to the developer what they want in a quick time frame that um doesn't rely on a face and a brand and a referral. It relies more on the um you know re the reviews and the

content of what's in it. Um the fact that they get what they
Akash Kanodia: I to be honest like really love the idea of this architecture. and how you are how the I would call how the user flow
Edward Kercher: want.
Akash Kanodia: goes like this is amazing. So what you are trying to do right now is and this is very similar to for example if I show you us what is our offer our offer is like if you come on board with us you might be paying like from like 1,000 to something else every month and taking that decision is very difficult for them too because it's sort of like for them like it's a it's a big chunk of money going forward to these marketings and whatever.

00:15:54

Edward Kercher: Yeah.
Akash Kanodia: work and you have to trust the agency too because you have you need to understand whether they are going to deliver or not. So it's the same case with us too. So how do we make sure that these people get on board? So in our case we are giving free brand audit. So I don't want them to directly get on board with a retainer. I want them to just book a call with me. Once they book a call in 30 minutes I understand your uh your brand. I give you back like a free audit. It doesn't matter whether you get like a retainer from us or not. But this is how they get into the leads funnel and they get into the system. And in your case, it's the same. So instead of me spending like thousands of dollars without understanding what is the next step and everything I can just directly get a physibility report from you which is not going to cost me a lot and in return I'm going to get like an expert session a report an analysis everything I need before I get started and it's after this it's up to them whether they want to work with us further or not but this is how you can get them inside the lead funnel.

00:17:09

Akash Kanodia: or the lead flow. Same is the case with HTML checker. Like we don't ask for money after friend. All you need to do is just sign up for like a trial for like 30 30 p. You use you use it. If you like it, you continue. If you don't, then it's all right. So this is exactly like you're following that exact uh very successful leads funnel where you give something without expecting anything and if your work is quality your work is like well presented more than often like they're going to get your actual full valued services later on which is which is the good part. So yeah, focusing on like feasibility

now makes a lot of sense and I would recommend like running ads on this like we did for like HMO
Edward Kercher: Yeah, I think they say something in the future I definitely want to try.
Akash Kanodia: check.
Edward Kercher: I um for even just to test it to be honest at the beginning to see if we can get some
Akash Kanodia: Yeah.

00:18:04

Edward Kercher: initial leads through it like cold leads through ads. What what I was going to say if you once they fill out their details on the tool if they decide they don't want to pay anymore and it looks like they're going to click away. I think there should be a popup which says um you know expert
Akash Kanodia: Did you miss?
Edward Kercher: they basically book your expert session for free.
Akash Kanodia: Yeah.
Edward Kercher: So they can just do that initial first step for free without a charge.
Akash Kanodia: M
Edward Kercher: We just offer that to them that we get them booked into the call.
Akash Kanodia: um I would suggest that we if it can be done for free then we
Edward Kercher: Um,
Akash Kanodia: should be just outright saying that everywhere. So like this could be a free 15-minute expert call because that is going to help me get a lot of signups. But as of now we do not say first of all I have not mentioned anywhere how much it costs. Uh we just get them to fill out this form.

00:19:01

Akash Kanodia: Uh they fill out like a nice like there's a journey of a form that that they do but in the end I was assuming that we would ask for payment but better would be to get them to just sign up for free for the expert session. If they turn up amazing you can pitch them the further services afterwards. If they don't then so like for example I am signing up I went through the 15inut expert session for free but if I want my reports if I want my analysis I have to pay the 199 or whatever price that they
Edward Kercher: Yeah. Yeah. Yeah. Yeah.
Akash Kanodia: are exactly

Edward Kercher: Um just like HM checker really.
Akash Kanodia: and it gives Jody a lot of room to sell the service uh because they are
Edward Kercher: Yeah.
Akash Kanodia: on the call it's face to face It's much
Edward Kercher: Yeah. Yeah. Yeah. Yeah.
Akash Kanodia: easier.
Edward Kercher: Okay. All right. Agreed. Um, sounds good. So,
Akash Kanodia: Yeah.

00:20:01

Akash Kanodia: So, uh let's let me quickly also go through the pages because this is something that we wanted to.
Edward Kercher: yeah, cool.
Akash Kanodia: So, once we share like what are the deliverables,
Edward Kercher: Yeah.
Akash Kanodia: what's included, we share the process. So, you submit your property details. Uh there is an automated desk study. We cross reference 15 plus data sources, planning, policy, flood risk, uh article for daylight and more. I would want this section to be also a little big like I would like to explain like what's more included in the automated desk study architect review. A senior architect reviews the data, produces the sketch layouts and validates commercial assumptions and visibility delivered your full reports, sketch schemes, financial analysis and architect meeting ready in 5 days and then what we check 15 plus data sources. Oh, it's already mentioned here as well. It's all right. So then this makes sense. So we've got all these 15 checks. I will have to double check whether you have provided me these points but it'll be great if you can just go through these on the Figma and uh help me out with if there is any update on this.

00:21:16

Edward Kercher: Okay. Yeah, I can comment on them.
Akash Kanodia: Uh yeah we've got our like
Edward Kercher: That's fine. Yeah, this is Are these Are these fake right now or are these real
Akash Kanodia: clients testimonials here.
Edward Kercher: ones?

Akash Kanodia: Uh these are actually fake. I'll just pick up the ones from like as of now this th this sort of doesn't have
Edward Kercher: Yeah, that's fine.
Akash Kanodia: any but I can pick it up from HM designers
Edward Kercher: Yeah. Yeah. Yeah. Get them in there. I don't know whether we
Akash Kanodia: or like if if I mean like I don't know how prominent these names are but if you want
Edward Kercher: could.
Akash Kanodia: we can keep some fake ones too that's to be honest that's like the
Edward Kercher: Yeah. Maybe I um
Akash Kanodia: starting
Edward Kercher: will I can contact some clients. I mean, it might be worth me opening up a pilot
Akash Kanodia: You know what will what will work out the
Edward Kercher: account with Fis Architecture and trying to get a load of clients to leave some

00:22:03

Akash Kanodia: best?
Edward Kercher: reviews because I could contact a load of people that we've worked with in the past and just ask them to. Um, and I'm sure they would.
Akash Kanodia: Yeah.
Edward Kercher: And I I quite like Trust Pilot because you can click through to
Akash Kanodia: Yeah.
Edward Kercher: it.
Akash Kanodia: Um yeah I mean and trust pilot is like it's trusted like it says like if you if you're on there or if you are on Google reviews and I can fetch all of those directly down
Edward Kercher: Yeah.
Akash Kanodia: here. So we can start populating that. And I was saying that if you can get like maybe not now but later on if you can get like video testimonials like you have for HMO checker it's going to work bomb when
Edward Kercher: Heat.
Akash Kanodia: people see faces and somebody talking about like your your product service work it like the it increases the conversion uh possibility by a lot.
Edward Kercher: Okay. Yeah, I can get
Akash Kanodia: Uh this is a call collection where I want to add like a picture on the back but it will be nice because there are

00:23:04

Edward Kercher: some
Akash Kanodia: not a lot of pictures as of now in here. Uh we've got our FAQ section which you can like go through on the on the thingy on the thingy. And my final call to action I still want to like design it very nicely. I want to showcase as many pictures as possible. And we've got our foot. So this was our uh visibility package page. We've got our commercial conversion page too which is a little different. Uh turn commercial buildings into viable residential schemes. Uh most complex conversions demand the sharpest analysis. Uh da then we have these numbers. So 200 plus conversion facings completed 1.8 million plus GDBSS I this is bit technical I don't usually like I don't get what this is I get this part but I don't know what is this GDPSS is so please make sure like
Edward Kercher: Yeah,
Akash Kanodia: these numbers are correct from our side yeah just cross check uh we know every route to
Edward Kercher: that's fine.
Akash Kanodia: consent so class MA class O full planning change of views uh we can add edit and update these two what we assess on every conversion uh passing in article article 4 exposure planning history structural uh suitability unit optimization financial viability infrastructure and services testimonial CTA FAQ and the the CTA again and this is sort of repeats I just

00:24:49

Akash Kanodia: noticed that this is only first one is related to commercial The rest one is so this is what sort of an offering is this like uh so if I want this service like do I still need like my I like as a customer I still need to go through the usual physibility report thingy right is
Edward Kercher: Yeah. Yeah.
Akash Kanodia: that's the case right okay so we are just so in the end everybody should end up
Edward Kercher: Yeah.
Akash Kanodia: getting a physibility report what we are doing with the four services is like what are the applications of it if I'm sorry if it's a new question or something but these are
Edward Kercher: Yeah.

Akash Kanodia: the four different applications but in the end I'll need this visibility report to go through these
Edward Kercher: I mean that's the the service is the is the feasibility package like I guess we can talk about the fact
Akash Kanodia: journals
Edward Kercher: that we do planning drawings technical drawings you know all of the rest of it the talking about the different uh this is almost like different sectors because you're talking about residential HMO and um commercial So yeah,

00:26:06

Akash Kanodia: Got it.
Edward Kercher: I don't I don't want to over complicate it to be honest.
Akash Kanodia: So
Edward Kercher: I I really want like I said the the website to be super simplistic and all it's all it's feasibility.
Akash Kanodia: yeah, which is why I didn't have these pages.
Edward Kercher: I don't know whether you just go services simply it's just the feasibility and then you we just have a page of our work and it's just simply on one page you have um yeah you just have examples of that you could put a header commercial conversions HMO conversions residential conversions you know what I mean just to
Akash Kanodia: Yeah,
Edward Kercher: reduce the number of pages
Akash Kanodia: got it. I mean, yeah. So, it will reduce number of pages for sure and I completely get your point like that was the reason why these pages were not there before, but I think I uh my structure was not correct, which is why I think you give the feedback. So, I get it.
Edward Kercher: Okay.
Akash Kanodia: So I think what we need is we need homepage which is sort of like bit of everything like what we do with the explanations and everything.

00:27:08

Edward Kercher: Yeah.
Akash Kanodia: Then we've got a dedicated one. I won't call it services. I would just call it visibility package.
Edward Kercher: Yeah.

Akash Kanodia: But inside this first I will explain these things which is the deliverables and steps and everything data sources. But I'll also have singular sections for commercial conversion HMOs
Edward Kercher: Yeah.
Akash Kanodia: and a high-end residential as like sections inside that particular page instead of having a dedicated page for the same creating less
Edward Kercher: Okay.
Akash Kanodia: confusion.
Edward Kercher: Um, okay. You could I guess you could have them as a another drop down.
Akash Kanodia: Yeah. So if I click on this, I'll go to the physibility package page but to the specific section which speaks about commercial instead of having a
Edward Kercher: Yeah. And then case studies you could just call our work.
Akash Kanodia: page.
Edward Kercher: And then you could have separate sections for HMO,
Akash Kanodia: Okay.
Edward Kercher: uh, commercial,
Akash Kanodia: Yeah,
Edward Kercher: convert,
Akash Kanodia: I yeah like maybe later on once we add a little more I can create like these

00:28:11

Edward Kercher: residential.
Akash Kanodia: filters that we've got on channel checker and uh the other stuff like on the blogs TV. So we can have like a filter like okay this was commercials all the commercials will pop up see all the
Edward Kercher: Yeah.
Akash Kanodia: rest will pop up
Edward Kercher: Yeah, I don't know if needs to be like the number one.
Akash Kanodia: and oh this is what you
Edward Kercher: Um,
Akash Kanodia: meant right sorry I think I gave it like a dedicated page uh but this
Edward Kercher: sorry.
Akash Kanodia: is what you meant right so picture submit property details picture automated test study picture of a person sketching architect review and physical. This is sort of what you wanted.
Edward Kercher: This is sort of what I wanted. Yeah. But different images and maybe a bit more.

Akash Kanodia: Yeah. Yeah.
Edward Kercher: Yeah. And you could click in it, make it and expand it maybe.
Akash Kanodia: Got
Edward Kercher: Yeah, that would actually be cool if you could just expand each section and just do a bit more reading on it.

00:29:09

Akash Kanodia: it.
Edward Kercher: And there'd be like a download as well.
Akash Kanodia: Tabs.
Edward Kercher: So you could you could actually have a look at some examples.
Akash Kanodia: Yeah. about is commercialia conversion. This is
Edward Kercher: Yeah, I actually prefer the look of this.
Akash Kanodia: from
Edward Kercher: I'm not going to lie. The I'm not overly sold on the really dark black and white.
Akash Kanodia: um I mean yeah I just applied the brand. Did I you saw the brand right? Uh were you shared like uh a brand guideline PDF for the same this one? Was this shared with
Edward Kercher: I didn't do that though. Um,
Akash Kanodia: you?
Edward Kercher: this is something Levi's done.
Akash Kanodia: Yeah. Yeah. I mean like uh our team member only did this but
Edward Kercher: Yeah, the color, to be honest, this is where the weird logo is coming from. The colors are wrong on that. Um,
Akash Kanodia: this one.
Edward Kercher: yeah,
Akash Kanodia: Yeah.
Edward Kercher: it's just what it is.

00:30:20

Akash Kanodia: I mean,
Edward Kercher: The color is very slightly
Akash Kanodia: it's a different it's it's a different color.
Edward Kercher: off.
Akash Kanodia: Yeah. What does thistle

Edward Kercher: A thistle is a flower. Um,
Akash Kanodia: mean?
Edward Kercher: do you know the flower? No. Sorry. Do you know if you if you type in thistle into the internet? So go to images. So it's this flower,
Akash Kanodia: Oh,
Edward Kercher: the thistle flower.
Akash Kanodia: okay.
Edward Kercher: So that's where the come from.
Akash Kanodia: Yeah.
Edward Kercher: But thistle, the reason I chose the name thistle is because like I think a thistle plant is a really beautiful flower, but it's um it also stands out.
Akash Kanodia: It's complex, complicated. Yeah. But
Edward Kercher: It's like confident and it stands out and it also,
Akash Kanodia: it's
Edward Kercher: you know, it's it's got spikes because it it sort of protects itself. I don't know.
Akash Kanodia: protected.
Edward Kercher: It was just an interesting thing that like we my philosophy on buildings is to make them sort of fit into their context, but um made them quite an interesting design at the same time.

00:31:24

Akash Kanodia: It's it has a it has a nice ring to it.
Edward Kercher: Fle Yeah.
Akash Kanodia: When you say this uh I think you are right the colors are different but that is this
Edward Kercher: What are you looking at here? What is this?
Akash Kanodia: is version one.
Edward Kercher: Right. Okay.
Akash Kanodia: How do you like the version two?
Edward Kercher: Got you. Yeah. So, if you if you just go to our actual website,
Akash Kanodia: Uh yeah this this is the
Edward Kercher: go to our actual website.
Akash Kanodia: film. This is a little bit darker but that's what the designer
Edward Kercher: Yeah. So, the logo is slightly different, but I I just went for a much lighter touch. I actually I quite like um you know this lighter feel to the website. I don't know the I don't I don't mind your version but it just feels very
Akash Kanodia: Yeah.
Edward Kercher: heavy.

Akash Kanodia: Yeah. So it's pure white. Um yeah.
Edward Kercher: Yeah. If

00:32:15

Akash Kanodia: Yeah. I mean so even if it's there in the in the brand guideline it's it's not necessary
Edward Kercher: we
Akash Kanodia: that I have to use this color for white I can
Edward Kercher: I don't know where this black has come from to be honest that I I don't mind that white.
Akash Kanodia: use
Edward Kercher: I'm not I'm just not overly sold on the black that it's not part of our brand. Like if I show you let me show you a design and access statement that we've done. One sec.
Akash Kanodia: I thought you asked us to do like a sort of redesigning of this which is I or like expand the branding document or something which is why this document was
Edward Kercher: I don't know if I did.
Akash Kanodia: made.
Edward Kercher: I think Levi just did it to be honest. I think he just did it at the time.
Akash Kanodia: Okay.
Edward Kercher: We were like I was taking a bit of time to go over the proposal and stuff.
Akash Kanodia: Okay.
Edward Kercher: So this we we use this color here on on all of our branding which is

00:33:07

Akash Kanodia: Ah, I like it.
Edward Kercher: it's like a dark um which is similar
Akash Kanodia: Darker.
Edward Kercher: to what we've used on HMO designers and stuff. It like it fits in better because ultimately we're going to have to make the two of them align at some point as well. HMO designers and fistle. So we're going to have to bring the branding in together because the second part of this is to rebrand the HMO
Akash Kanodia: Yeah.
Edward Kercher: designers website. Yeah.

Akash Kanodia: Yeah.
Edward Kercher: And then we have this slightly lighter gray color.
Akash Kanodia: Yeah.
Edward Kercher: And then at the end
Akash Kanodia: Can you share this document with me so I can extract these colors and I can like in the next version
Edward Kercher: Yeah.
Akash Kanodia: I'll change the background color something.
Edward Kercher: Yeah, that's fine. Let's do that.
Akash Kanodia: And I like the dark dark color too.
Edward Kercher: I'll
Akash Kanodia: So I can instead of like sort of black black I can use this color for like highlight or something.
Edward Kercher: yeah maybe try and use this color and then if we could have a version which is just light like the website that I have right now that um

00:34:07

Akash Kanodia: They want me to give like it'll be very easy to give like a dark mode light button. I can do.
Edward Kercher: pardon
Akash Kanodia: So I they I can add like a button on the website and like it turns dark mode and light mode however you want it.
Edward Kercher: Oh, I see.
Akash Kanodia: Yep.
Edward Kercher: Uh, I don't know. What do you think?
Akash Kanodia: I mean it's a gimmick in the end of the day but it does help with people who might have issues with readability but some people just cannot read like some stuff on like a particular
Edward Kercher: I don't think we should do light and dark though.
Akash Kanodia: contrast but it's again like it's a gimmick at the end of the day like
Edward Kercher: I think I think just go with one or the other. The personally I think probably light.
Akash Kanodia: yeah but the colors that you have that
Edward Kercher: Um I just I want the brand to feel new and fresh. Do you know what I mean? I want to get I want to get away from what what I want our brand to be the opposite of is the old architecture in an office luxury architecture where you know it's all very stagnant and you've got the same drawing office there for the last 40 years like I want it to feel light and fresh and data driven and young and new you know what I mean so I think going for lighter color will

00:35:21

Akash Kanodia: Yeah. Yeah. Like if I see for example
Edward Kercher: hopefully you know canote that a little bit more okay Cool.
Akash Kanodia: come.
Edward Kercher: All right. If you send me those bits, I'll um try to mark them up over the
Akash Kanodia: Yeah, all good.
Edward Kercher: weekend.
Akash Kanodia: I'll also send you the transcript of this like notes or something like that so that like you are already aware about what is discussed and then you can add
Edward Kercher: Yeah.
Akash Kanodia: to okay anything
Edward Kercher: Cool. Okay.
Akash Kanodia: else uh anything related to checker you mentioned something regarding ads
Edward Kercher: Oh. Uh yeah. So no, I just had a quick chat with um Anuman. We're we're getting a really decent amount of signups like you know one or two a day that are actually going on paid as well which is cool.
Akash Kanodia: Good.
Edward Kercher: It's not it's not massively refle reflecting onto the revenue for whatever reason. I mean we've done okay this month which um but it's you know we haven't

00:36:21

Akash Kanodia: It's a big win to be honest.
Edward Kercher: been Yeah.
Akash Kanodia: like having organic purchases is a big thing. It's it's a very big thing. One or two doesn't
Edward Kercher: Yeah. So that's good. Um we maybe just need to focus on the retention of them a little
Akash Kanodia: matter.
Edward Kercher: bit but uh we have done a lot um over this period where we haven't been doing marketing. So the products a lot better. Um also we're going to be doing some changes with the pricing and stuff like that which I spoke to you about. But um yeah, the idea was, let me just get the email that I sent to Andrew Man up cuz it had

the time scales which might be quite useful for you to
Akash Kanodia: Hey, just a sec.
Edward Kercher: know.
Akash Kanodia: Sorry, just a sec.
Edward Kercher: Okay, you need to leave.
Akash Kanodia: Uh you were showing me something.
Edward Kercher: stressed on that call.
Akash Kanodia: Uh no it was the delivery and the guy is like unable to understand and it's important because you I was in front of you or I

00:38:37

Edward Kercher: Okay, fair enough.
Akash Kanodia: was
Edward Kercher: Yeah, makes sense. Uh all right. Yeah.
Akash Kanodia: Yeah.
Edward Kercher: So basically we're going to look to do the marketing uh week commencing 9th of March. Okay. So next week basically I'm doing all the testing uh and then we want to launch the marketing the week after which should be good.
Akash Kanodia: Yeah.
Edward Kercher: Also FYI and Shiman is going to help manage the marketing side. Okay. So,
Akash Kanodia: Yeah. Yeah.
Edward Kercher: I'm basically I'm basically going to do uh the a bit more of the
Akash Kanodia: Sure.
Edward Kercher: client like the customer liaison and um the public facing like personal brand stuff and he's going to do a bit more of the marketing management and the customer management. Um so, but anyway, we'll um we'll have a call with you before the 9th of March, I think, and set set all of that up.
Akash Kanodia: Yeah, perfect. I'm excited to use. So I have a couple AI tools that I have already been using on like ads campaigns and it's usually for audit but it has given me a lot of insight and in our case like because the data is stored in pixel and we have actually made some purchases I think the next campaigns are going to be val especially with the the new ads that you had

00:39:48

Edward Kercher: Let's

Akash Kanodia: already shared with me like the new videos and everything. It's going to be fun. It's going to be fun.
Edward Kercher: get it to a thousand users.
Akash Kanodia: Oh yeah. Yeah. Thousand thousand. Where are we right now?
Edward Kercher: We're at 130.
Akash Kanodia: I think about 300 130.
Edward Kercher: 130,
Akash Kanodia: Yeah.
Edward Kercher: which is which is good. I mean,
Akash Kanodia: Yeah.
Edward Kercher: like, I'm not complaining. I obviously want I wanted it to be a lot more a lot quicker, but things don't work out that way. So, um I think now we Yeah.
Akash Kanodia: Scaling is diff scaling is difficult. But once you get it like once you get 2,000 you'll be like okay when I'm going to reach 10,000 when I'm
Edward Kercher: Yeah. Yeah.
Akash Kanodia: going to reach a million and so on.
Edward Kercher: Yeah.
Akash Kanodia: But it's it's fun like give me give me some very ambitious like numbers always like I think it helps push me push I think it's fun because whenever I talk about
Edward Kercher: Cool.
Akash Kanodia: checker with it like uh with like it's he's always happy.
Edward Kercher: Yeah. Yeah.
Akash Kanodia: So I would like to make sure that that stays.
Edward Kercher: Yeah. Yeah. So I think it is basically we just want a big push. So like if we can get the ads profitable reasonably quickly then we can just start throwing some some big money at it basically.
Akash Kanodia: Yeah, it's
Edward Kercher: Um grabbing as much of that market as we can and then and then selling for
Akash Kanodia: getting
Edward Kercher: millions and millions. That would be great. Yeah. Let's just let's let's sell the thing. Um yeah.
Akash Kanodia: Yeah.
Edward Kercher: Cool. Okay.
Akash Kanodia: Yeah. Yeah. Yeah. That's my That's my Oh, you do? Oh, nice. Yeah. You do? Yeah. Cheers.
