

Website Final Update Brief

Final concise implementation notes for Akash and the team

01. Homepage

thistlearchitecture.co.uk

Keep the existing design. The homepage only needs a small number of positioning and conversion changes.

- Hero: change the main line to “Feasibility-First Architecture.” Keep “Nationwide” in the supporting copy rather than forcing it into the headline.
- Primary CTA: change “Book Your Feasibility” to “Get Your Fixed Fee” and route it to the common pricing / qualification calculator.
- Secondary CTA: use “See How Feasibility Works” or “View Our Work” so the architecture side of the practice remains visible.
- Featured projects: add a subtle stage or outcome line where useful, e.g. “Feasibility → Planning → Technical → Construction” or “Commercial → 4 Apartments / Planning Approved”.
- After the five-step feasibility process, add one short bridge: “If it’s a Go, we can take it forward” with planning, design, technical, tender and construction referenced in one line.
- Trustpilot: use evergreen wording such as “5-star customer reviews on Trustpilot”; do not hard-code the number of reviews.
- Footer: change hello@incollective.works to hello@thistlearchitecture.co.uk.
- Do not add a large services section or substantially increase the homepage copy.

02. Pricing Page

thistlearchitecture.co.uk/pricing

Keep the current layout and calculator. The main change is to show the final price clearly without publishing the internal pricing formula.

- Keep the four-route product ladder: £15.99 HMO Property Check / £49.99 Automated Feasibility / Architectural Feasibility from £298 / Free Expert Session.
- Architectural Feasibility should be the visually preferred option: label it "Recommended" or "Our Full Feasibility".
- Remove "How The Fee Is Built" and the exact additions/deductions. Replace it with "What Affects Your Fee".
- Under "What Affects Your Fee", list the factors only: property size, existing/proposed use, units or bedrooms, extent of alterations, planning complexity, heritage/listed status and alternative options.
- Make the difference between £49.99 and £298+ explicit: £49.99 = data-led / automated; £298+ = data + architect + planning interpretation + sketch/layout testing + professional recommendation.
- Keep "Free Expert Session" for land, 600m²+ properties, unusually complex mixed-use schemes or projects that cannot be reliably auto-priced.
- Move one strong feasibility testimonial slightly higher if practical, particularly a review where a feasibility prevented a poor purchase.

Principle: show the customer exactly what they pay; do not publish the underlying pricing engine.

03. Feasibility Package

thistlearchitecture.co.uk/feasibility-package

Keep the design, but shorten the page and align it with the new pricing structure. This page should explain and sell the service; it should not start with the full detailed intake.

Pricing and entry point

- Replace “from £298” as the headline starting price with: “Feasibility from £49.99” and immediately below “Architect-led feasibility from £298”.
- Do not use £15.99 as the main feasibility headline; that is the HMO Checker quick-screening product. (maybe make more faint than others, make clear it is a partner page and offer?).
- Show £49.99 Automated Feasibility as the accessible entry option, but make £298+ Architectural Feasibility the recommended/full service.
- Bring the product choice and short pricing calculator near the top. Use the same calculator component and pricing logic as the Pricing page.
- Primary CTA throughout: “Get Your Instant Fixed Fee”.

Condense the existing content

- Merge “Five Deliverables. One Decision.”, “Real Documents. Not A Brochure.” and the nine-bed HMO example into one section: “What You Actually Receive”.
- Show the core outputs together: Feasibility Overview; Sketch Scheme; Planning Research; Space Standards / Accommodation Schedule; Risk & Recommendation.
- Use the nine-bed HMO as a compact “See it in practice” example linking to the relevant case study/sample.
- Keep “Five Days, Five Steps”, but update the wording to match the new payment → full brief → analysis → architect/report review journey.
- Keep “What Is Analysed”, but shorten the copy and let the data/graphics do more of the work.
- Remove the standalone “One Fee. Everything In.” section once pricing has been brought higher up. Retain exclusions as a compact FAQ/accordion.

People and proof

- Strengthen “Who You’re Working With”. Make Edward and Kaan part of the reason to buy the architect-led service.
- Edward: Founder & Director; commercial/technical experience; founder of HMO Designers and HMO Checker; first-hand developer perspective.
- Kaan: Design & Planning Lead; architecture, residential/HMO and planning experience; avoid wording that implies chartered town-planner status unless formally correct.
- Jodi: Business Development & Expert Sessions; property sales background, strong HMO and developer knowledge, and the first point of contact for Expert Sessions. Helps clients understand the opportunity, clarify their objectives and choose the right feasibility route.
- Use concise credibility proof such as hundreds of conversions designed, nationwide project experience, planning success and core project types. Look at hmo designers, use the same context but more general.
- Lead the reviews with the strongest “No-Go / avoided bad purchase” example. Keep the existing FAQs.

04. Feasibility Study Examples

thistlearchitecture.co.uk/case-studies/feasibility-studies

No redesign. Reorder, crop and comprehensively repopulate the existing case studies.

- Put the most complete / information-rich feasibilities first, regardless of chronology.
- Prioritise examples with multiple sketch options, full appraisal/planning research and the widest supporting document set.
- Akash to audit every case study against the original project folders. Treat the source files as the source of truth and assume the current site is incomplete.
- Restore every relevant sketch option and supporting document that formed part of the actual feasibility package.
- For website sketch images, create clean web-only crops with the drawing disclaimer, Thistle logo and title-block material removed.
- Do not alter the original issued drawings or source PDFs.
- Crop tightly around the architectural content so the sketches read as portfolio material rather than screenshots of formal drawing sheets.

Simple QA test for each case: can a potential client see the full depth of what that client actually received?

05. Completed Projects

thistlearchitecture.co.uk/case-studies/completed-projects

Keep the page as a visual architecture portfolio. Finished photography should always lead.

- Every project card on the overview page must use a strong completed-project photograph. Do not use PDFs or drawing previews as listing thumbnails.
- Ad videos to videoed projects
- Technical PDFs/drawings can remain within project detail pages, but use web display copies with Thistle title blocks cropped/removed. Preserve original source files.
- Where useful, add only a subtle project-type descriptor such as Residential Extension / Commercial-to-Residential / New Build / Class Q.

Priority order at the top of the page

1. 1930s House Extension / Bereweke Avenue
2. Highbury - add as a Completed Project
3. Monument House
4. Bishopstoke Road
5. Derby Road
6. Vacant Corner Plot
7. New House in the New Forest
8. Class Q
9. One House to Four Homes
10. Accessible Family Home

06. Expertise / Conversion Pages

Commercial-to-Residential / HMO / Mixed-Use / High-End Residential

Keep the current page template. These pages are primarily SEO landing pages, so improve search intent and project proof without turning them into long SEO articles.

- Rename the navigation label “Conversions” to “Expertise” (preferred) or “Sectors”. Do not use “Services”.
- Keep the existing /conversions/ URLs unless there is a deliberate 301 migration plan. The visible navigation label can change independently.
- If the parent navigation item is retained, make it a simple Expertise overview rather than effectively dropping users straight into Commercial-to-Residential.
- Add a dedicated “Co-Living & Large HMO” page. Differentiate it from the standard HMO page with Sui Generis, shared amenity, layout optimisation, management, fire/acoustics, licensing and larger-building circulation.
- Use search-intent-led H1s, with the existing punchy marketing line underneath as supporting copy.
- Suggested H1 direction: Commercial to Residential Conversion Architects; HMO Architects & Feasibility Specialists; Co-Living & Large HMO Architects; Mixed-Use Development Architects; High-End Residential Architects.
- Audit every title tag/meta description and remove duplicated branding such as “| Thistle Architecture | Thistle Architecture”.
- Replace repeated generic feasibility FAQs with sector-specific planning/design questions.
- Use the strongest relevant case study on each page and create two-way contextual links between Expertise pages, case studies, tools, feasibility/pricing and relevant guides.
- Use genuine project imagery with descriptive alt text. Avoid near-duplicate doorway pages; each page needs distinct risks, policy issues and real Thistle project proof.

07. About

thistlearchitecture.co.uk/about

Make the page about Thistle Architecture as a practice, not primarily about the fact that the team buys and invests in buildings.

- Keep “A Feasibility-First Architectural Practice” as the hero direction.
- Replace “We Buy, Convert, And Invest In Buildings Too.” with an architecture-first “Who We Are / How We Work” section.
- Core themes: Feasibility First; Existing Buildings & Retrofit; Data-Informed Decisions; Developer-Led / Commercially Aware Design; One Team Through Delivery. Look at description on Trustpilot.
- Keep direct development experience as supporting credibility, but do not make it the main definition of the practice.
- Replace all current staff imagery with the new professional photography from the latest shoot, (to be shared).
- Use the full-office team photograph prominently before the individual team profiles.
- Add a wide team/studio B-roll video near the top: muted, short, web-compressed, with a strong poster image/fallback and lazy loading.
- Rewrite profiles around what each person contributes to projects rather than CV-style bullet lists. Make Edward and Kaan particularly clear around feasibility, planning, design and commercial experience.
- Keep the reviews. Use evergreen Trustpilot wording.
- Keep “86% faster” only if the calculation is defensible; otherwise replace it with a factual proof point such as “500+ conversions designed and built”.

08. Contact

thistlearchitecture.co.uk/contact

Keep the page simple, but give visitors three clear routes depending on how ready they are to proceed.

Three routes

Visitor intent	Action
Ready to assess a property	Get Your Fixed Fee → common pricing / calculator flow
Not sure what they need	Book a Free Expert Session with Jodi → direct Calendly booking
General / other enquiry	Keep the existing contact form

- Add a small Jodi profile/photo beside the Expert Session route and allow users to book directly into her Calendly.
- Calendly can be embedded or opened on click; lazy-load it so it does not slow the initial page load.
- Change hello@incollective.works to hello@thistlearchitecture.co.uk on this page and site-wide.
- Keep response-time wording realistic; do not promise an instant call unless operationally guaranteed.

09. Feasibility Journey & Pricing Structure

This is the site-wide conversion logic. All high-intent CTAs should feed into one coordinated feasibility journey rather than separate enquiry forms.

Route	Position / next step
£15.99 HMO Property Check	HMO-specific screening → HMO Checker. Keep as a low-cost entry route, not the main Thistle feasibility headline.
£49.99 Automated Feasibility	Feasibility starts here. Data-led / no architect. Take the full £49.99 upfront (recommended), then unlock the detailed brief.
Architectural Feasibility from £298	Main / Recommended product. Short calculator → fixed fee → 50% holding deposit → detailed brief → analysis + architect + sketch scheme + review.
Complex / large project	600m ² +, land or schemes that cannot be auto-priced → Free Expert Session with Jodi.

KEY: All fees inclusive of VAT.

Architectural Feasibility flow

1. User completes the short calculator. Capture name, email and phone so a lead exists even if payment is abandoned.
2. Show the fixed fee and 50% holding deposit. CTA: "Secure My Feasibility" or equivalent.
3. After payment, unlock the existing detailed feasibility questions, uploads and full project brief. Carry all calculator answers forward so nothing is asked twice.
4. When the detailed brief is submitted, and Calendly booked notify Jodi immediately (send email to jodi with info). Her call validates the brief and captures extra context; notes should feed into the same AI/Claude feasibility record before the analysis is finalised.

Once the email has been sent to Jodi, we can handle the rest of the process below internally, but I have detailed it below anyway so we are all aware.

6. Jodi to book the architect review via Calendly. Earliest meeting should be at/after the promised delivery point.
5. Trigger the feasibility workflow: project data + planning/data sources + Jodi notes + AI analysis + architect review + sketch scheme.
7. Define the five-working-day SLA as starting once both payment and all required project information are complete.

Automated £49.99 flow

1. Payment → detailed brief → automated analysis/report.
2. Client to receive email with analysis.
3. After delivery, prompt a Free Expert Session with Jodi to run through the report and identify whether the client should upgrade to Architectural Feasibility or another Thistle service.

10. Site-Wide Consistency & Final QA

Final checks only - no redesign. The aim is to make every page feed the same customer journey and remove inconsistent wording/links.

Standard CTA labels

Use	CTA
Primary / high intent	Get Your Fixed Fee → pricing / qualification calculator
Learn about the service	See How Feasibility Works → Feasibility Package
Needs guidance / complex scheme	Book a Free Expert Session → Jodi Calendly
HMO-specific low-cost entry	HMO Property Check → HMO Checker

- Remove or repoint generic “Book Your Feasibility / Start Feasibility” buttons that bypass pricing or drop users into the detailed intake too early.
- Create one lead/project record across calculator, payment, detailed intake, Jodi calls, Calendly, report delivery and next-service conversion.
- Track: calculator started/completed; fee shown; payment started/paid/abandoned; detailed intake started/completed; Jodi call; Calendly booking; feasibility generated/delivered; £49.99→£298+ upgrade; feasibility→planning/technical conversion; original source page/campaign.
- Apply the email update, evergreen Trustpilot wording and “Conversions”→“Expertise” wording consistently across navigation/footer/pages.
- Audit page titles, meta descriptions, H1s, alt text and internal links.
- Test every CTA, calculator state, Stripe route, data carry-forward, file upload, Calendly trigger, Jodi notification and feasibility-tool trigger on desktop and mobile.
- Check page speed after adding the About video and Calendly embed; lazy-load both where possible.

Implementation priority: 1) pricing + feasibility workflow, 2) site-wide CTA rewiring, 3) page content/photo updates, 4) case-study file audit and SEO QA.
