

Pricing & Feasibility Calculator Brief

Website handoff for Akash - pricing hierarchy, automatic fee rules, expert-session fallbacks and checkout behaviour.

£15.99 HMO Check	£49.99 Automated Site Feasibility	From £298 Architectural Feasibility	Bespoke Complex Projects
----------------------------	---	---	------------------------------------

Commercial objective

The site should feel productised and transparent: users enter a property, answer a short questionnaire, receive an instant fixed price where appropriate, and pay online. Larger or unusually complex projects should never be force-priced by the calculator; they should route to a free Expert Session with Jodie and a bespoke feasibility proposal.

1. Customer-facing pricing

HMO Property Check £15.99 Automated HMO screening. Planning and Article 4 checks, local HMO information, property/location data, key planning considerations and initial development indicators. CTA: Check an HMO - £15.99	Automated Site Feasibility £49.99 Detailed data-led appraisal. For existing buildings nationwide: commercial-to-residential, apartments, HMOs, co-living, mixed-use and similar opportunities. Target delivery within approx. 30 minutes. CTA: Analyse My Site - £49.99	Architectural Feasibility From £298 Data + architectural judgement + design. Includes architect review, sketch scheme, proposed layout, unit/bedroom testing, one-hour architect meeting, Jodie project review and recommended next steps. Target turnaround: 5 working days. CTA: Get My Instant Feasibility Price
---	---	---

Automated Site Feasibility - core contents

- Property and site overview; location and surrounding context
- Existing use, potential development routes and relevant planning policy
- Planning history, nearby precedents, constraints and planning-risk assessment
- Local space / amenity standards and indicative development capacity
- Indicative bedroom or unit potential
- Local rental and sales comparables, indicative income and GDV
- High-level viability indicators
- Building Regulations / technical constraint flags
- Heritage, highways and parking considerations
- Recommended development strategy, roadmap and next steps

Boundary: the £49.99 product remains 100% automated and data-led. No architectural drawings or architect review are included.

2. Architectural Feasibility - automatic pricing

Automatic pricing is available only while the project remains within a predictable scope. Pricing must stop completely once a hard-stop trigger or complexity safety threshold is reached.

Gross Internal Area	Base Fee
Up to 150m ²	£298
151-250m ²	£348
251-350m ²	£398
351-450m ²	£448
451-550m ²	£498
551-600m ²	£548
Over 600m ²	Expert Session

Formula: £298 covers up to 150m² GIA. Add £50 for every started 100m² above 150m². Automatic pricing stops above 600m².

Complexity uplifts

Project characteristic	Uplift
Straightforward single-use conversion	£0
Mixed-use development	+£100
Conservation Area	+£50
Grade II listed building	+£150
Two separate buildings	+£75
Significant extension element	+£75
One additional design option	+£75
Significant special planning constraint	+£50

Heritage rule: do not stack Conservation Area and Grade II listed uplifts. Grade II = +£150 only.

Complexity safety rule

Even below 600m², route to a Free Expert Session if **3 or more complexity factors** apply, or if total complexity uplifts would exceed **£250**. This prevents automatic pricing from exposing Thistle to an unexpectedly involved scope.

3. Hard stops - route to Free Expert Session

If any of the following apply, do not display an architectural feasibility price and do not request payment. Capture the enquiry and route directly to Jodie.

- GIA greater than 600m²
- Development land / vacant plot
- Predominantly new-build development
- Three or more separate buildings
- Masterplanning or whole-site redevelopment
- Grade I or Grade II* listed building
- Two or more fundamentally different development strategies requested
- Floor area cannot be established reliably
- Insufficient existing drawings / information to define the building
- Proposed development or use is unknown
- User chooses "Other / Not sure" for proposed development
- Project is otherwise flagged internally as unusually complex

Customer message

This project needs a closer look.

Based on the information you have provided, we recommend a short conversation before defining the feasibility scope.

Book a Free Expert Session with Jodie

Free · No obligation

What counts as a standard project?

- Existing building, 600m² GIA or less
- No more than two buildings
- Sufficient property information to understand the existing fabric
- Primarily conversion, refurbishment or extension
- One reasonably clear development strategy to test
- No exceptional heritage or masterplanning complexity

4. Customer questionnaire & routing

Question	Suggested inputs	Routing note
Property address	Address lookup / manual entry	Capture first
Approx. existing GIA	Known area / I don't know	Unknown and cannot verify → Expert Session
Existing use	Residential, HMO, office, retail, industrial, hospitality, care, mixed-use, other, land	Land → Expert Session
Proposed use	HMO, apartments, residential conversion, mixed-use, extension, commercial conversion, new build, not sure, other	New build / not sure / other → Expert Session
No. of buildings	1 / 2 / 3+ / not sure	3+ → Expert Session
Significant new build?	No / extension / significant new build / not sure	Significant new build → Expert Session
Options to test	1 preferred / +1 alternative / several / not sure	Several → Expert Session
Existing information	Plans, surveys, brochures, photos, planning info, uploads	Insufficient info → Expert Session

Routing order

1. Capture address and customer/project details.
2. Check hard-stop criteria before calculating a price.
3. If eligible, calculate area fee.
4. Apply complexity uplifts.
5. Run complexity safety check (3+ factors or >£250 uplift).
6. If still eligible, display final fixed fee and send to online payment.
7. If not eligible, retain all entered data and send directly to Free Expert Session booking.

5. Checkout & Expert Session behaviour

Stage	Checkout action
HMO Checker - £15.99	Direct HMO Checker checkout
Automated Feasibility - £49.99	Capture site data → online payment → automated report
Architectural Feasibility - £298+	Questionnaire → calculate fixed fee → online payment → project onboarding
Complex / >600m ²	No payment → Free Expert Session → bespoke fixed-fee proposal → online payment

Exit-intent / abandonment pop-up

Once a visitor has meaningfully engaged with the feasibility form, leaving the page or abandoning checkout should trigger a secondary conversion route to Jodie.

Want to talk it through first?

Not quite ready to start your feasibility?

Book a **free Expert Session with Jodie** and talk through the property before committing.

Primary CTA: Book My Free Expert Session

Secondary CTA: Continue My Feasibility

Pop-up behaviour

- Show only after meaningful form interaction; never on page load.
- Show on genuine exit intent / checkout abandonment. On mobile, use navigation-away or inactivity behaviour.
- Show no more than once per browsing session.
- Do not show after purchase or once an Expert Session is booked.
- Retain already-entered project and customer data.
- Pass name, email, phone, property address, proposed use, GIA, calculated price, complexity flags and uploads into the Expert Session lead where possible.

Internal protection

Thistle must retain a manual override. If the information supplied materially understates the project size or complexity, the project can be changed to **Bespoke Feasibility Required** before work begins.

Suggested checkout wording

Instant feasibility pricing is based on the project information supplied. Where the scale, condition or complexity of the property materially differs from the information provided, we may contact you before commencing work to confirm the appropriate scope. Where agreement cannot be reached, the feasibility fee will be refunded.

6. Implementation logic for Claude / developer build

Use an eligibility gate before price calculation. The calculator should return either an instant-payment route or an Expert Session route.

```
function getFeasibilityRoute(project) {  
  // HARD STOPS  
  if (!project.gia || project.gia <= 0) return expert();  
  if (project.gia > 600) return expert();  
  if (["vacant_land", "new_build_development"].includes(project.projectType)) return expert();  
  if (project.numberOfWorkBuildings >= 3) return expert();  
  if (project.isMasterplan) return expert();  
  if (["Grade I", "Grade II*"].includes(project.heritageGrade)) return expert();  
  if (project.numberOfWorkDevelopmentStrategies >= 3) return expert();  
  if (!project.sufficientExistingInformation) return expert();  
  if (!project.proposedUseKnown) return expert();  
  
  let price = 298;  
  let uplift = 0;  
  let factors = 0;  
  
  // AREA  
  if (project.gia > 150) {  
    price += Math.ceil((project.gia - 150) / 100) * 50;  
  }  
  
  // COMPLEXITY  
  if (project.mixedUse) { uplift += 100; factors++; }  
  if (project.heritageGrade === "Grade II") { uplift += 150; factors++; }  
  else if (project.conservationsArea) { uplift += 50; factors++; }  
  if (project.numberOfWorkBuildings === 2) { uplift += 75; factors++; }  
  if (project.significantExtension) { uplift += 75; factors++; }  
  if (project.additionalDesignOption) { uplift += 75; factors++; }  
  if (project.specialPlanningConstraint) { uplift += 50; factors++; }  
  
  // SAFETY STOP  
  if (factors >= 3 || uplift > 250) return expert();  
  
  return { route: "instant_payment", price: price + uplift };  
}  
  
function expert() {  
  return { route: "expert_session", price: null };  
}
```

Examples

Project	Outcome
140m ² house → HMO	£298
320m ² office → apartments	£398
430m ² commercial → mixed-use	£448 + £100 = £548
400m ² Grade II conversion	£448 + £150 = £598
580m ² Grade II + mixed-use + two buildings	Expert Session (3 complexity factors)
800m ² office conversion	Expert Session (>600m ²)
Vacant development land	Expert Session

UX principle: the website should never feel like “contact us for a quote”. Standard projects should move through address → questionnaire → fixed price → payment. The Expert Session is a deliberate fallback for hesitant buyers and non-standard schemes.
